

- Writing our first Python Program of Hello World.

Syntax of Python is very easy. you just need to write "Hello World" in print function to do it on your shell/IDLE.

```
# print("Hello World !! Please Save Trees")
```

- Write a function to calculate sum of two numbers.

```
int a number1 = 15  
int number2 = 25
```

} → variable declaration and value assignment

```
result = num 1 + num 2
```

→ calculating sum

```
print(result)
```

→ give output as (40)
