

* Importing / Exporting data from dataframe to CSV/Text files :-

Creating dataframe from CSV File or Text File is all about importing data from CSV File.

Today, we are going to create a CSV file by exporting data of a dataframe. For this, we use `to_csv()` function.

Eg.

```
import pandas as pd
dict = { "Name": ['Ajay', 'Aman', 'Raj', 'Yash'],
        "Class": ['12th', '11th', '9th', '12th'],
        "Age": [18, 17, 15, 18]
        }
```

```
df = pd.DataFrame(dict)
```

```
df.to_csv("Path.extension")
```

```
df.to_csv("D:/csv/CSV1.csv")
```
