

• Deleting Rows and Columns from Dataframe:

(i) Deleting Columns :-

Columns can be deleted / removed in three ways.

> From delete (del) Keyword :-

```
del <DF_name>["Column_Name"]  
del df["Age"]
```

> From Pop Function :-

```
<DF_Name>.pop("Column_Name")  
df.pop("Age")
```

> From drop() function :-

```
<DF_Name> = <DF_Name>.drop(["col-name"],  
axis = 1)
```

```
df = df.drop(["Age"], axis = 1)
```

(ii) Deleting Rows :-

Row from a dataframe can be deleted or removed by a single drop function.

< DF_Name > = < DF_Name >. drop ([Row-Index])
df = df. drop ([Employee 6])
