* Renaming Row & Column Labels of a Dataframe :→

First of all, giving index via index[] method and renaming index labels is totally different and are distinct. Please don't get confused.

Renaming of labels of row and column takes place through rename() function.

> Changing row label :→

<DF_Name> = <DF_Name>.rename (index = {"old_Label":"New_Label", ----})

df = df. rename (index = {"A" : "student 1"})

> Changing Column Labels :→

<DF Name> = <DF_Name>. rename (columns = {"old_Index" : "New_Label", ---})

df = df. rename (columns = {"Age":"Std_Age"})
