* <u>Head and Tail Functions.</u>

Head and Tail Functions are used to fetch n number of rows/values/data from top and bottom respectively.

<u>Syntax</u>: print (series.head(n))
print (series. tail(n))

where,

      n= no.of rows/data/values.

<u>Note</u> → when the value of n is not provided, default value is **5.**

<u>Eg.</u>   print (ser. head (4)) ⟶ print first 4 rows.
print (ser. tail (3)) ⟶ print last 3 rows.

print (ser. head())
print (ser. tail()) }

           print 5 rows from top and bottom respectively
